

Fitting Instructions: Rear Bumper Protector & Footwell Mats.

You will require the following items to fit your bumper protector.

Hairdryer or Heatgun

Gloves

Hot Soapy Water

IMPORTANT – Please read the following instructions to make sure you fit the bumper strip / foot mats correctly.

Make sure that you are working in a dust-free environment. THE AMBIENT TEMPERATURE MUST BE BETWEEN 18-35C, IF YOU FAIL TO DO THIS THE STRIP WILL NOT STICK TO THE BUMPER AS IT SHOULD

1. Put your gloves on.
2. Clean the bumper thoroughly with hot soapy water, now dry completely with a heat gun or hairdryer.
3. Wipe the bumper with the alcohol cloth provided and wait 5 mins.
4. Peel the paper off the back of the bumper strip and carefully place it in the correct position onto the bumper.
5. With a heat gun or hairdryer gently heat the entire bumper strip, especially around the edges. The bumper strip will become soft and if you have ridges on the surface you need to gently press the bumper strip over them, when it cools down it will keep its shape.

For “Over the Edge” Bumper Strips: As Above plus the following points:

1. Gently heat the bumper strip with a heat gun or hairdryer long-ways through the middle so it starts to bend at least 45 degrees over the edge of the bumper.
2. With your fingers (wear gloves) press firmly over the bumper especially around the edges.

Reasons why the bumper strip may not stick: Temperature is too cold. The bumper has not been cleaned enough. Not enough heat applied to the bumper. Brand new bumpers are often sprayed with silicone from factory (needs extra cleaning).

After cleaning the bumper, heat with a heat-gun or hairdryer.

Warm the bumper so it moulds over the ridges.

If fitting an over the edge style warm the edge so it folds over.
